

Flexbox layout

DISPLAY: FLEX

Every box below is laid out by the flex reflower, not by floats or tables. The same CSS you would write for a browser drives the PDF.

FLEXIBLE LENGTHS

Free space is shared by `flex-grow`; a `flex-basis` in points opts out of growing.

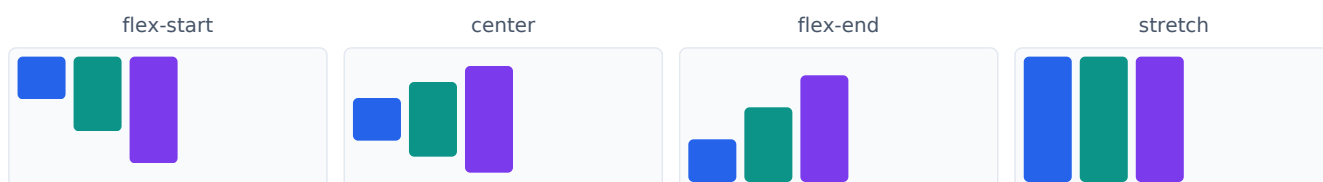

Two items each want 60% of the line, so `flex-shrink` takes 10% off each until they fit.

JUSTIFY-CONTENT

ALIGN-ITEMS

Single items can opt out with `align-self`. `baseline` is accepted and behaves as `flex-start`.

AVG. STAY
7.6 d

Three cells at `flex: 0 0 31%` with a `gap: 7pt` wrap onto a second line by themselves.

ORDER AND FLEX-DIRECTION

written 3rd

written 2nd

written 1st

`order` moves items without touching the markup.

column

align-items: flex-end

gap: 4pt

`flex-direction: column` stacks along the block axis.

EVERYDAY PATTERNS

ReportsFilterExportCancelSave

A toolbar is one flex row: an empty `flex: 1` spacer pushes the last two buttons to the far edge.

Kulhudhuffushi

31%

Fixed label, elastic rail, fixed value: `width` on the outer items, `flex: 1` on the middle one.

MN

Media object

A fixed-width avatar next to a paragraph that takes the remaining width. `align-items: flex-start` keeps the avatar pinned to the top while the text wraps over as many lines as it needs.
